

Ogden BancShares, Inc. expands with Jaguar Software

“Over the years Jaguar Software and Data Business Equipment have supplied us with all the imaging and capture products and services we’ve needed - it has truly been a partnership. And because they kept us updated on the Check 21 legislation and what Jaguar’s Software could do for us, one of our banks was able to obtain a new large customer that was previously with one of our competitors.”

Sr. Vice President and Cashier
Community Bank of Boone
Ogden BancShares, Inc.**

Challenge

Over the past nine years, Ogden BancShares, Inc., has been on a growth spurt – expanding from a one bank holding company in Ogden, Iowa to a four bank holding company with each of their **affiliate banks operating with their own independent bank charter.**

A lot has changed in banking in those nine years, especially in the technology arena - including check imaging, branch capture, Check 21 legislation, and merchant capture. Ogden BancShares, Inc., needed an equipment and software partner that could meet their goals – now and into the future.

Solution

For nine years, Data Business Equipment Inc., (DBE) and Jaguar Software have teamed to provide all the imaging and capture needs for Ogden BancShares, Inc., helping them become a successful bank holding company in the Midwest.

In January, 1999 Ogden BancShares, Inc., began working with DBE to develop an operational plan for the growth of their organization. In 1998, they were a one bank holding company and

wanted to start a de novo bank in another town.

They determined very quickly that their new bank would start day one as a complete check imaging bank. In 2000, Ogden BancShares, Inc., applied for another bank charter in a third community. Like their second bank, this bank also used the expertise of DBE and Jaguar’s imaging software, helping the bank’s assets at year-end 2006 exceed \$180 million.

And then again in 2006, the company was given a fourth bank charter in another community. This bank’s growth has exceeded all expectations with checks imaged using Jaguar’s MirrorImage and DBE’s products and services.

During all this growth, Ogden BancShares, Inc., added branch capture as Check 21 legislation allowed them to retain checks in the facility where they were first deposited. Consequently, couriering checks became a product of the past.

Now Ogden BancShares, Inc., is offering merchant capture to their customers, wherever they are located. As a result of implementing Jaguar’s MirrorImage Merchant Capture product and the ability to offer merchant capture, the company was able to secure the business of a company with over 18,000 customers that was banking with a nearby competitive bank.

Business Needs
